C; Function:
A; Description: structural component of extracellular polymer associated with anchorin C; Superfamily: unassigned collagens; animal Kunitz-type proteinase inhibitor homology C; Keywords: collad coll; extracellular matrix; glycoprotein; hydroxylysine; hydroxypr F; 116/Domain: signal sequence #status predicted <SIG> F; 17-2944/Product: collagen alpha 1(VII) chain #status predicted <MAT> F; 17-253/Domain: aminor terminal nonhelical #status predicted <MAT> F; 17-253/Domain: uninor terminal nonhelical #status predicted <MAT> F; 21-31-316/Domain: the monoterminal nonhelical #status predicted <MAI> F; 31-316/Domain: the monoterminal nonhelical #status predicted <MAI> F; 31-316/Domain: fibronectin type III repeat homology <FN2> F; 368-583/Domain: fibronectin type III repeat homology <FN5> F; 568-583/Domain: fibronectin type III repeat homology <FN5> F; 568-583/Domain: fibronectin type III repeat homology <FN3> F; 568-583/Domain: fibronectin type III repeat homology <FN3> F; 568-582/Domain: fibronectin type III repeat homology <FN3> F; 568-582/Domain: fibronectin type III repeat homology <FN9> F; 568-1045/Domain: fibronectin type III repeat homology <FN9> F; 568-1045/Domain: fibronectin type III repeat homology <FN9> F; 5118-1228/FR9jon: cell attachment (R-G-D) motif F; 118-1228/FR9jon: cell attachment (R-G-D) motif
     Complex: type VII collagen is probably a homotrimer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    F:1334-1336/Region: cell attachment (R-G-D) motif

Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft especials controlled actachilis, posniasis, inflammatory bowel disease, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chronic myelogenous leukemia, tame's disease, osteoarthritis, Lyme's disease, cacheria and autoimmune diseases e.g. myasthemia gravis, autoimmune diabetes and systemic diseases e.g. myasthemia gravis, autoimmune diabetes and systemic lipus erythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial TANGO-128, 140, 197, 212, 213, 224, 239 sequences are useful in parmacogenomics and for monitoring clinical trials. TANGO plarmacogenomics and for monitoring clinical trials. TANGO colypeptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a colypeptides are solitable for the prophylactic and therapeutic disorder associated with aberrant TANGO expression. A wide range

AAD05300-AAD05379 represent CDNAs corresponding to 28 human secreted protein genes, and AAE01544 represent human secreted protein fragments or variants. AAE01514-AAE01544 represent human secreted protein fragments or variants. CAE01514-AAE01544 represent human secreted protein fragments or variants. The genes and their secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the presence of amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the mutations in the new genes. Specific uses are described for each of the mutations in the new genes. Specific uses are described for each of the new proteins of the diagnosis or treatment of and include developing products for the diagnosis or treatment of and include developing products for the diagnosis or treatment of an include developing products for the diagnosis or treatment of an include developing products (e.g., rheumatoid arthritis), inflammation, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, architestinal disorders, populasis), sepsis, diabetes, atherosclerosis, skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, skin disorders, prognancy-related disorders, enditing and epithelial cell proliferation, to prevent skin adiom coll continue of primary tissues, to regenerate tissues, to identify their culture of primary tissues, to regenerate tissues, to identify their culture of primary tissues, to regenerate tissues, condacting and editive or preservative to modify storage properties.

C alleviating symptoms associated with the disorders mentioned above, and im diagnostic immunosasays e.g., radioimmunosasay or enzyme limman immunosasay or enzyme limman immunosasay.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid molecules encoding 28 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

Abd05300-Abd05379 represent cDNAs corresponding to 28 human secreted cordein genes, and AAE01436-AAE01513 represent the proteins they encode. AAE01514-AAE01544 represent human secreted protein fragments or variants. The genes and their secreted proteins are useful for preventing. The genes and their secreted proteins are useful for preventing. The genes and their secreted proteins are useful for preventing. The genes and their secreted proteins are useful for preventing the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the mount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the conditions in the new genes. Specific uses are described for each of the conditions in the new genes. Specific uses are described for each of the conditions in the new genes. Specific uses are described for each of the conditions in the new genes. Specific uses are described for each of the conditions and alternative disorders, diseases of the immune system, abnormalities, haematopoietic disorders, diseases of the immune system, alleryies, neurological disorders, schizophrenia, asthma, alleryies, neurological disorders, schizophrenia, asthma, and infections. The proteins can also be used to aid wound the strongers and infections. The proteins can also be used to aid wound control printing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting colluture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in removers and in cell proliferation. The motein of the invention can be used in diagnostic immunosassay e.g., radioimmunosassay or enzyme linked in invention.

Antibodies specific for a protein of the invention epercent a human control of the invention.
                                                                                                                                                                                                                                New nucleic acid molecules encoding 28 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dr primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the
                                                                                                                                                                                        HEGFERASEQIYYENRQGYRTASVIIALTDGELHEDLFFYSEREANRSRDLGAIVYCVGV 180

                                                                                                                                                                                                                                                                                                                         δŽ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polypucleotides are useful immunosuppressant and cytostatic activity. The polypucleotides are useful in gene thereapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemotactic/chemokinetic activity, haemotactic/chemokinetic assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Note: The sequence data for this patent did not form part of the printed specification.
                                                                                                                                                                                                                                                  Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemothic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemothic; thrombolytic; drug screening; arthritis; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ä

                                                    the 5'-end sequence's end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length AAH13628 and AAH13631 to AAH13612 represent human cDNA sequences; AAH03166 to AAH13622 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TANGO 266; TANGO 216;; TANGO 261; TANGO 267; cellular proliferation; cellular differentiation; cellular adhesion; von Willebrand factor-associated disorder; cell trafficking; cancer; hematopoietic associated disease; atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; iatrogenic disease; inflammation; meningitis; Alzhelmer's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.
sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of

AAB18455-57 represent human TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO cescribes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO cellular proliferation, modulate cellular proliferation, modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate the proliferation of isorders, such as cancer, and thematopoietic associated diseases and disorders, such as cancer, and hematopoietic associated diseases and disorders, spleen associated diseases and disorders, spleen associated associated diseases and disorders, spleen associated associated diseases, modulate the proliferation, differentiation, asthma and bronchlectasis, intestinal disorders, spleen associated as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral ocdema, hydrocephalus, brain herniations, latrogenic disease, inflammations, bydrocephalus and encephalitis, and treat hepatic disorders.

Correlal and viral meningitis, alzhalmer's Disease, prain cancers, hydrocephalus and encephalitis, and treat hepatic disorders.

Correlation of bone and cartilage associated of the sease, multiple sclerosis, brain cancers, corebrain cancers, and created of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 243 GNGFRHARNVDRVLCSFKINDSVTLNEKPFSVEDTYLLCPAPILKEVGMKAALQVSMNDG 302

                              The present sequence represents a human TANGO 216 polypeptide. The specification also describes TANGO 266, TANGO 261, TANGO 262, and specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular contribution and/or modulate cellular adhesion, modulate estracellular matrix structuring, factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate the proliferation, differentiation, disorders, such as cancer, modulate the proliferation, differentiation, disorders, such as cancer, modulate the proliferation, differentiation, disorders, such as cancer, undonear in the bone marrow, and leukocytes, and/or function of cells that appear in the bone marrow, and leukocytes, creat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, plumonary congestion or cedema, emphysema, chronic bronchitis, bronchial asthma and bronchictasis, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the cardiovascular disorders such as ischemic heart disease, modulate the cardiovascular disorders such as ischemic heart disease, or cells and to treat bone and/or cartilage associated diseases or
                                                                                                                 TANGO 266; TANGO 216;; TANGO 261; TANGO 262; TANGO 267; cellular proliferation; cellular differentiation; cellular adhesion; von Willebrand factor-associated disorder; cell trafficking; cancer; hematopoietic associated disease; atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; iatrogenic disease; inflammation; meningitis; higheimer's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel human and murine secreted proteins designated TANGO 216, 261, 266 and 267 useful as modulating agents of ceilular processes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            44..213

                                                                                                                                                                                                                                                                                                                                                                                                          08-SEP-2000.
describes TANGO 266, TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO 261 polypeptides can be used to endulate cellular adhesion. Modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular and acancer, modulate cell adhesion in proliferation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoletic associated diseases and disorders, atelectasis, and hematopoletic associated diseases and disorders, spleen associated diseases. Modulate renal disorders, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral ocedema, hydrocephalus, brain herniations, latrogenic disease, inflammations, cerebral cerebral cerebral cellular.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders. note: the present sequence does not appear in the specification; it was

ABB18455-57 represent human TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO 260 clular differentiation and/or modulate cellular adhesion. The cellular differentiation and/or modulate cellular adhesion. The proteins can be used to creat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular adhesion in proliferation, and/or function of cells modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, apleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral ocedema, hydrocephalus, brain hermiations, latrogenic disease, inflammations, latrogenic disease, cerebral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 5;

The invention relates to isolated nucleic acid molecules encoding novel human secreted extracellular matrix proteins (SPS). The novel human secreted extracellular matrix proteins (SPS). The polynucleotides and proteins are used to prevent, treat a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. For example, disorders associated with decreased expression of SPS. The SP polynucleotide or a vector expressing them may be administered to treat diseases by gene therapy. Antisense molecules may be administered to down regulate expression of SPS by binding with the cells own genes and preventing their expression. The polynucleotides may be as antigens to produce antibodies and to identify modulators used as antigens to produce antibodies and to identify modulators used as antigens to produce antibodies and to identify modulators antagonists and antagonists of the SPS. The anti-(SP) antibodies and antagonists and actecting the presence of SPS in samples. The disorders include for example: immune/autoimmune diseases (e.g. HIV (human immunodeficiency virus) infections, anaemia, rheumatoid arthritis and multiple sclerosis), cancers and hyperproliferative disorders (e.g. melanomas, neoplasms of the breast or liver, Sezary syndrome and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's and Parkinson's diseases and cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nucleic acid molecules encoding human secreted extracellular matrix

The present sequence represents a murine TANGO 216 polypeptide. The control also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular modulate cellular adhesion, modulate cellular adhesion. The proteins can be used to treat any von Willebrand cellular adhesion. The proteins can be used to treat any von Willebrand cellular adhesion, and cell trafficking and/or matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular adhesion, modulate extracellular matrix structuring, cellular interactions, modulate cell adhesion in proliferation, disporders, such as cancer, modulate the proliferation, differentiation, differentiation, disporders, and leukocytes, creat bone marrow, blood and hematopoietic associated diseases and chronic bronchitis, bronchial asthma and bronchiectasis, intestinal chronic bronchitis, bronchial asthma and bronchiectasis, intestinal conforcers, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders as ischemic heart disease, modulate the cardiovascular disorders as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated with the consider of the pang also be used to treat disorders associated with the consider of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ovaries, cerebral oedema, hydrocephalus, brain herniations, iatrogenic disease, inflammations, bacterial and viral menhagitis, Alzheimer's Disease, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders.

                  AAB18458-60 represent murine TANGO 216 proteins. The specification also describes TANGO 266, TANGO 262, and TANGO 257. The TANGO CCC describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO CCC describes TANGO 266, TANGO 262, and TANGO 267. The TANGO CCC cellular differentiation modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, composition in proliferation, modulate cellular interactions, and cell trafficking and/or migration, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoletic associated diseases and disorders, atelectasis, confidential disorders, spleen associated diseases and disorders, spleen associated diseases modulate the proliferation, differentiation, as ischemic and cartilage cells and cortained as also be used to creat disorders associated with the ovaries, and cerebral ocdema, treat disorders associated with the ovaries, and cerebral ocdema, treat disorders associated with the ovaries, and cerebral ocdema, treat disorders associated with the ovaries, and cerebral ocdema, they disease, milipple sclerosis, brain meningits, Alzheimer's Disease, cerebral corters, parkinson's disease, multiple sclerosis, brain cortained constant hepatic disorders.

Contect the present sequence does not appear in the specification; it was considered with the ovaries of the particular of the constant of the present sequence does not appear in the specification; it was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        3,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240 VVRGNGFRHARNVDRVLCSFKINDSVTLNEKPFSVEDTYLLCPAPILKEVGMKAALQVSM 299

describes TANGO 266, TANGO 216 proteins. The specification also describes TANGO 266, TANGO 262, and TANGO 267. The TANGO 260 cellular be used to modulate cellular proliferation, modulate cellular adhesion, modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, modulate cell trafficking and/or migration, modulate cellular interactions, modulate the proliferation in proliferative disorders, such as cancer, that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, understooletic associated diseases and disorders, spleen associated associated diseases and disorders, spleen associated consideration of pronchiectasis, intestinal disorders, spleen associated as such as isohemic heart disease, modulate trenal disorders, treat cardiovascular disorders such as isohemic heart disease, modulate the proliferation, differentiation, and or inteat bone and/or modulate the proliferation of bone and cartilage cells and to treat bone and/or modulate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, latrogenic disease, inflammations, bacterial and viral meningitis, Alzheimmer's Disease, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders.

AAB18458-60 represent murine TANGO 216 proteins. The specification also describes TANGO 267, and TANGO 267. The TANGO 267 the TANGO 267. The TANGO 267 the TANGO 267. The TANGO 267 the TANGO 267 the tangent of the collular descration, modulate cellular differentiation and/or modulate cellular adhesion. The disorder, regulate extracellular matrix structuring, cellular adhesion, cellulate cell rafficking and/or migration, modulate cellular interactions, and cell trafficking and/or migration, modulate cellular interactions, combilate the proliferation in proliferative disorders, such as cancer, combilate the proliferation, differentiation, and/or function of cells modulate the proliferation of disorders, treat bone marrow, blood that appear in the bone marrow, and leukocytes, treat bone marrow, blood such and bronchietated diseases and disorders, atelectasis, pronchial combined trains, and isorders, spleen associated as associated disorders, reat cardiovascular disorders such disorders associated disorders, treat cardiovascular disorders and/or function of bone and cartilage cells and to teat bone and/or cartilage associated with the ovaries, and cerebral oceana, cartilage cells and to disease, inflammations, hydrocephalus, brain heniations, latrogenic disease, cerebral concephalus and encephalitis, and treat hepatic disorders. In the procession of concerns and core and the procession of the propertication; it was notes and very may also be used to concerns and viral meningitis, and treat hepatic disorders. In the procession of core and meningitis, and treat hepatic disorders. In the specification; it was notes and viral meningitis, and treat hepatic disorders.
           hematopoletic associated disease; atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; iatrogenic disease; inflammation; meningitis; Alzheimer's Disease, cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      60 NEIYYFVEQLAHKFISPQLRMSFIVFSTRGTTLMKLTEDREQIRQGLEELQKVLPGGDTY 119

agents for regulating cellular processes like asthma, graft versus-host diseases, rheumatoid arthritis, psoriasis, inflammatory versus-host diseases, rheumatoid arthritis, psoriasis, inflammatory bowel disease, septic shock, ulcerative colitis, Crohn's disease, chod colitis, Crohn's disease, content and autoimmune disease, osteoarthritis, Lyme's disease, cachexia and autoimmune diseases e.g. myasthemia gravis, autoimmune diabetes and systemic diseases e.g. myasthemia gravis, autoimmune diabetes and systemic clasease e.g. myasthemia gravis, propositis themselves. Partial transgenic animals and the TANGO polypeptides themselves. Partial TANGO-128, 140, 197, 212, 213, 224, 239 sequences are useful in TANGO-128, 140, 197, 212, 213, 224, 239 sequences are useful in parmacogenomics and for monitoring clinical trials. TANGO polypeptides are suitable for both prophylactic and therapeutic polypeptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a methods for treating a subject at risk of a disorder associated with aberrant TANGO expression. A wide range
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel nucleic acid sequences encoding TANGO-128, 140, 197, 212, 213, 224 and 239 polypeptides useful for the treatment of asthma, rheumatoid arthritis, psoriasis and autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TANGO; 128: 140; 197; 212; 213; 224; 239; modulating agent; asthma; graft versus-host disease; rheumatoid arthritis; psoriasis; inflammatory bowel disease; septic shock; ulcerative colitis; Crohn's disease; chronic myelogenous leukemia cancer; liver disease; hodyfin's disease; osteoarthritis; Lyme's disease; cachexia; autoimmune disease; myasthemia gravis; autoimmune disease; systemic lupus erythematosus; transgenic animal; diagnosis; prophylatic; therapeutic; mouse.
